

Basic Parts of a Firearm

The Stock
is the handle of the firearm.
This can be one or two pieces.

The Barrel
is the metal tube that the
bullet or shot travels through
when the gun is fired.

The Action
is the moving parts that load,
fire, and eject the shells
or cartridges.

Muzzleloaders
have locks instead
of actions.

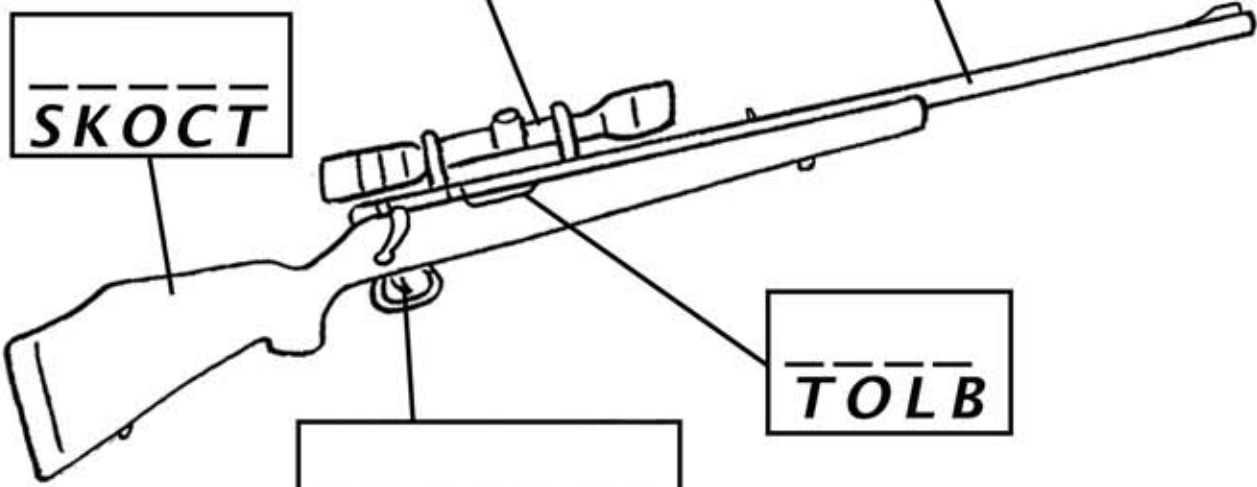

This is where the term
'lock, stock, and barrel'
comes from.
